TITLE

: MULTILAYERED RESIN CONTAINER

AND MANUFACTURE THEREOF

ABSTRACT :

PROBLEM TO BE SOLVED: To reduce amounts of penetration of fuel at a part where a hole for injection and discharge of blow air is closed.

SOLUTION: When a fuel tank 62 is taken out of a molding device, fins 64, 66, which protrude from a gap of a cavity at the time of molding and are solidified, attach to the upper and lower edges of the tank 62 respectively, and a seal layer is provided in each of the fins 64, 66. The fins 64, 66 are removed from the tank 62 to form the tank 62 into a product, while a circular resin plug 68 is cut off from the fin 66, which is cut off. Next the removed resin plug 68 is welded to a hole 69 formed in the tank 62 to inject or discharge blow air so that the hole 69 is closed with the plug 68.
